## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see Remarks, filed 12/08/04, with respect to claims 1-18 have been fully considered and are persuasive. The 103(a) rejection of claims 1-18 has been withdrawn.

### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance:

Claims 1 and 14 disclose a method for extracting infinite ambiguity from an input finite-state transducer (FST), including building a first and second factor where the first factor does not contain any infinite ambiguity while the second factor retains the infinite ambiguity of the input FST.

Chung et al. (6,278,973) teaches a language recognition methodology whereby any finite-state model of context may be used in a very general class of decoding cascades, and without requiring specialized decoders or full network expansion and within the expansion a FST is used to represent the cascade. Mohri (6,032,111) teaches disambiguating a model by labeling alternatives with auxiliary arcs or symbols.

Devadas et al. (Decomposition and Factorization of Sequential Finite State Machines) teach decomposing a finite state machine into smaller interacting machines so as to optimize area and performance of the eventual logic implementation, along with techniques for state assignment based on the decomposition algorithms.

However, the combination of Chung et al., Mohri, and Devadas et al. do not teach or suggest building a first and second factor where the first factor does not contain any infinite ambiguity while the second factor retains the infinite ambiguity of the input FST.

3. Dependent claims 2-13 and 15-18 are allowed since they further limit each of the respective independent claim or their own parent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
